

AisleGuard

Physical barriers for work area protection

SpaceGuard Products introduces a new guarding concept that provides a protective barrier for plant equipment and pedestrian walk way areas. The system uses heavy gauge structural rails that provide employees and equipment protection from dangerous plant equipment.

The *AisleGuard* railing system is ideal for preventing damage to machinery by fork lifts and other mobile equipment. Installation is simple due to the design.

AisleGuard is easy to order and is available in standard 4', 6', 8', 9' and 10' rails. Posts are 21" for single tier and 43" for double tier. Triple tier posts are also available.

AisleGuard is the perfect solution in preventing costly accidents to equipment and complies with safety standards for automated equipment. The product has been tested to withstand impacts of over 10,000 lbs. at 4 mph.

Special customer applications are no problem. For your local dealer, please call us at 1-800-841-0680.

- **Protect pedestrians and equipment.**
- **Low cost.**
- **Heavy gauge construction.**
- **Easy installation.**
