

01

NO LONGER SWING SPECIFIC

Does your drawing show a door swinging left, but your customer wants it to swing right? No sweat! With a quick & easy flip of the handle, your new panic bar door can swing either way.

New strike ensures the panic bar latches properly to help prevent opening the door from the outside. Improved design also works with a security rim device when electronic access control is required.

IMPROVED LOCKING

06

05

PROVIDES MORE ADJUSTABILITY

New panic bars are more adjustable in the field to combat unlevel floors.

02

IN-STOCK & INSTALLS LIKE STANDARD DOORS

Our new design utilizes the same hinge jamb as a standard door. You can now install adjacent panels prior to the doors—saving you time and a little frustration.

03

STRONGER INTERNAL DESIGN

New panic bars have a stronger internal design to increase durability with everyday use.

The keying of the panic bar doors can now match the keying of other doors in the same system—no need for separate keys.

FLEXIBLE KEYING OPTIONS

04

Every panic bar is tested to fit at the factory and shipped separate from the door, reducing both transportation costs and the likelihood of damage in transit. One person can easily install it in under 15-minutes!

SpaceGuard Products continually strives to improve our products and offerings through innovations, design, and customer feedback. Please let us know how we are doing or if there's something that could make our products even better. We'd love to hear from you!
