

Industry Uses:

- DEA/Pharmaceutical Cages
- Data Center/Colocation Cages
- Controlled Building Access
- Bonded Warehouse Cages

Features:

Hydraulic Hinge Door Closers

Available for hinge doors. Easily installed using pre-drilled mounting bracket.

Panic Bars

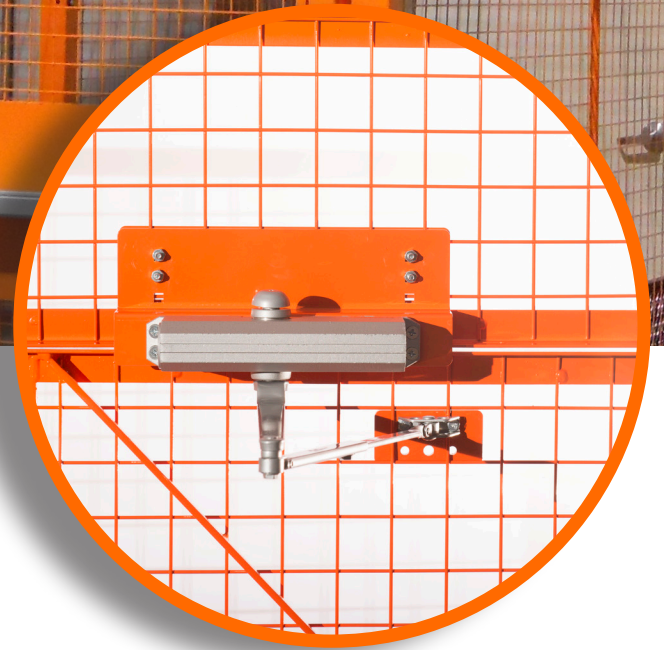

Push bar exit devices come pre-installed and are stocked in both 3' & 4' wide x 7' high hinged doors. Provides necessary emergency egress as required by Code. Includes ADA compliant lever and integrated cylinder lock.

Panic Bar Shields

BeastWire field mounted shadow boxes, are used to prevent unauthorized personnel from reaching over or through a door and depressing the panic bar on the inside to release the latch.

Electric Strikes

Electric strikes are available for BeastWire Mesh hinge doors, panic bar hinge doors, and slide doors. 24VDC strikes are designed specifically for our systems and provide controlled access.

Slide Door Closers

Hydraulic Slide Door Closers

Hydraulic slide door closers (patent pending) are mounted to the track with an arm that rolls in a guide channel on the back of the door to push it closed. These closers offer a cost-effective alternative to gravity-dependent track setups used by others. Yet, they are suitable for high security requirements or code compliance such as Data Center Server or DEA/Pharmaceutical Cages.

Automated Slide Door Operators

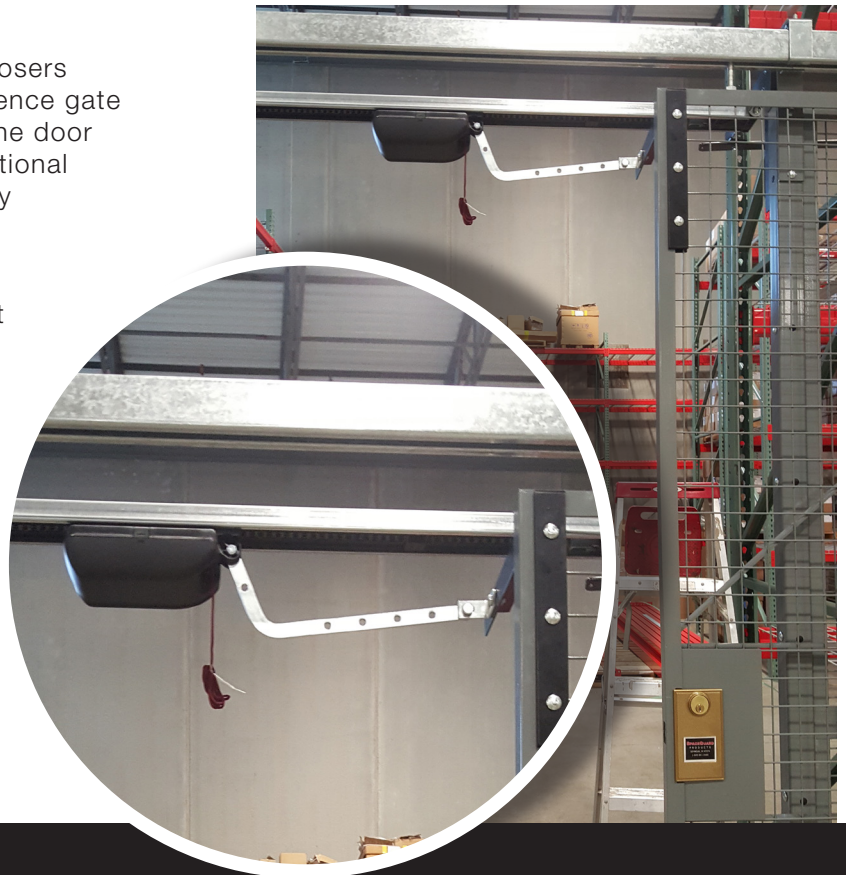

BeastWire Mesh offers automated slide gate closers that are a major improvement over traditional fence gate operators. Our operators are mounted above the door and separate from the track; whereas like traditional operators take up valuable space and are easily damaged by mobile equipment.

Features:

- Powerful motor with only one moving part
- Industrial strength, with quiet operation
- No maintenance required
- Installed by factory professionals
- 5-year warranty on opener. 2-year on accessories
- Internal obstacle detection sensors for safety

Available Options:

- Delayed closing (to allow mobile equipment & personnel time to pass through)
- Light barriers
