

INDUSTRY USES

- Distribution & Warehousing
- Manufacturing
- Energy & Utilities
- Pharmaceutical
- Biotech & Chemical

FEATURES

THE GRRRIPPER BRACKET

The world's first and only true drop-in bracket. Saves installation time and stays securely in place upon impact when the drop pin is correctly installed.

HEAVY-DUTY CONSTRUCTION

With a name like "Beast," you expect strength. Our fully framed, fully welded design ensures long-lasting durability.

CUSTOM FIT FOR YOUR BAY

Whether extending above uprights, protecting driver tunnels, or enclosing rack sides, we offer tailored solutions to fit your needs.

BUILT FOR SAFETY

Unlike netting, our steel panels won't cut or fray upon impact.

RELIABLE PROTECTION

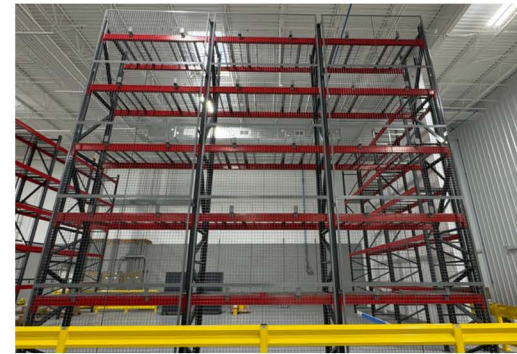

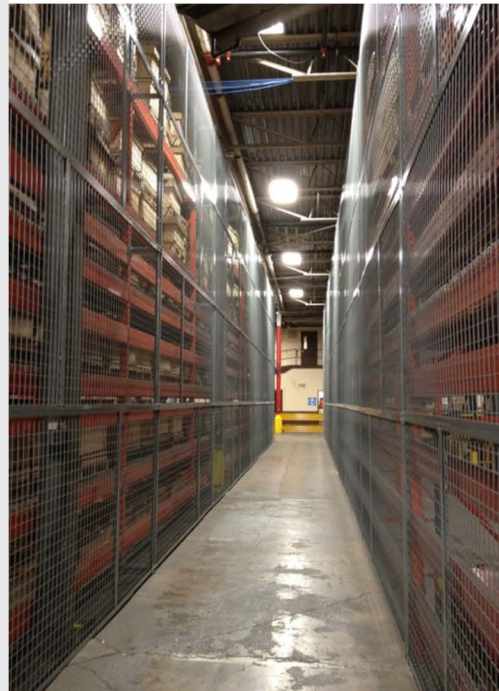

Backed by our industry-leading 10-year warranty.

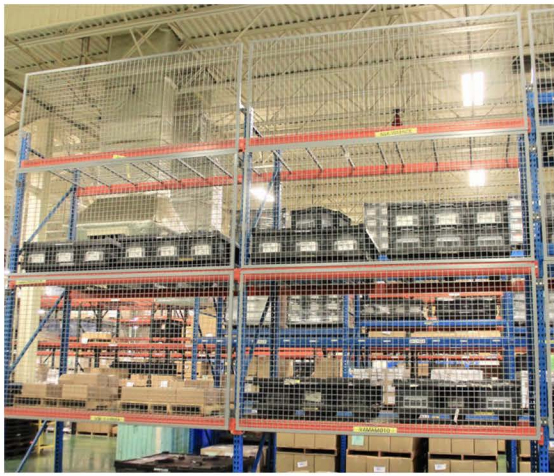

PROVEN PERFORMANCE

Meets and exceeds ANSI Standard MH31.1 for rack safety.

- ✓ Works with your storage racking system, not against it
- ✓ Prevents costly damage and injuries from falling objects
- ✓ Secures valuable inventory and tooling from theft

PANELS

BeastWire® panels are made of 10-gauge wire welded into a 2" square mesh pattern and securely welded into a 1-1/4" x 1/8" thick full-angle frame. Panels can be stacked to reach the required height—for example, a 14' enclosure can be achieved with two 5' panels and one 4' panel.

Standard panels are designed to match the inside dimension between uprights, with multiple mounting holes to avoid beam-level obstructions. Optional: 6-gauge mesh available for enhanced security.

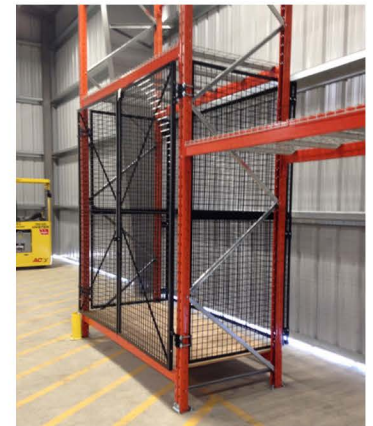

Oversized Bays – For bays wider than 10 feet, two panels are joined using a 4' splice channel, bolted to both the top and bottom panels for added stability.

DOORS

Doors are constructed similarly to panels but include flat steel stock welded diagonally for extra rigidity.

- Pre-punched for **bolt-on padlock hasps** (included)
- Threaded rod ends for secure **pivot-style brackets**
- **Bi-parting, slide, and custom** door options available upon request

BRACKETS

A variety of panel brackets are available to accommodate different rack styles and sizes:

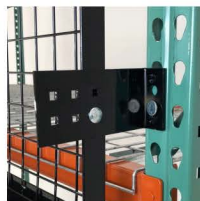

- **Bolt-On Mounted Angle Bracket** – Securely attach panels flush to uprights or with offsets up to 12".
- **Adjustable Angle Patented Grrripper Bracket** – Drop-in design for teardrop uprights, adjustable from flush to 12" offsets.
- **Adjustable Universal Bracket** – Designed to fit most upright styles.
- **Door Bracket** – Welded pintles on mounting plates securely capture the upright for flexible positioning.
