

FORDLOGAN WOVEN WIRE PARTITIONS & BEASTWIRE MESH GUARDING

*FOUND IN DATA CENTERS, COLOCATION MARKETPLACES,
SERVER ROOMS, & DRBC SITES*

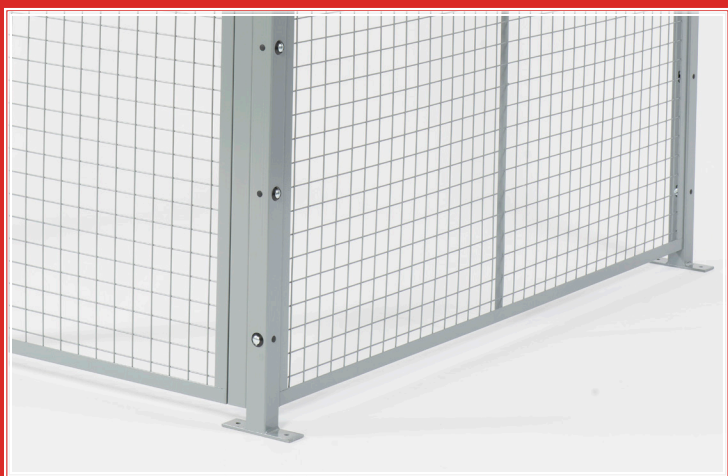

Ask About Our
Custom Stock Program

FordLogan uses our exclusive UNI-MESH design maintaining a 1-1/2" diamond mesh shape consistently throughout the entire panel and caging systems.

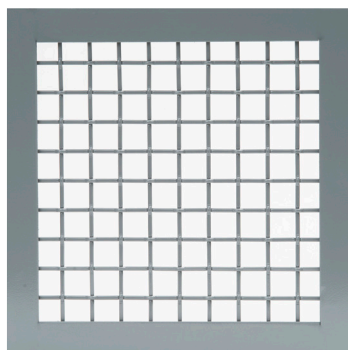

Because FordLogan panels enclose the wire inside the frames, they offer the same clean-finished look on both inside and outside of the cage.

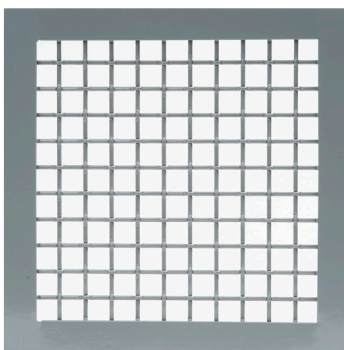

BeastWire Mesh Guarding offers several mesh size options from 1/2" to 2" opening for Data Center security.

The most commonly used is our 2" square (as shown in the picture to the left) that comes in both 6 and 10 gauge material.

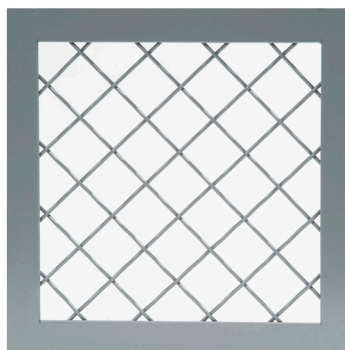

BeastWire Mesh Server Cages are also available in 1" woven mesh, 1/2" woven mesh, 1-1/2" diamond mesh, and perforated carbon steel.

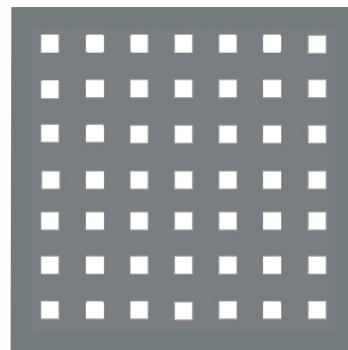

1" Woven Mesh

1/2" Woven Mesh
