

CENTURION

PRIMUS JACK

THE FIRST STEP IN EVERY SAFE RACK REPAIR.

The Centurion™ Primus Jack is a modular lifting tool designed to safely elevate the front leg of a pallet rack upright for fast, efficient repair kit installation, all without unloading pallets in most situations. Built for installer ease and jobsite conditions, the Primus Jack combines strength, adjustability, and control in a mobile, zinc-plated assembly. Unlike other jacks, the Primus lifts from the repair zone, not the ground, for greater stability and precision where it matters most.

SPECS

Compatible Widths: 3", 4" and 5"

Compatible Uprights: Roll Formed Structural

Max Repair Height: 13'

Attachment Style: Front column lift

Capacity: 36,000 lbs.

Stroke: 6"

Finish: Zinc-plated

BENEFITS FOR INSTALLERS

- **No pallet unloading required** in most applications*
- **Easier handling** with lightweight jack head and no need to lift heavy components overhead
- **Faster setup** with intuitive sliding height adjustment
- **Greater stability** due to fewer stacked parts and lift-point proximity
- **Versatile upright compatibility** structural and roll formed columns
- **Cost-effective transportation** thanks to lighter components that reduce shipping and handling costs

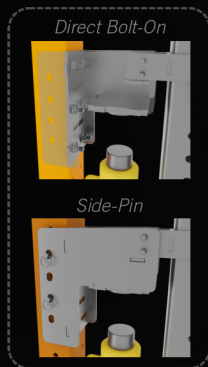

*Always assess rack stability before lifting. Unloading may be necessary depending on rack condition and safety considerations.

CENTURION™ PRIMUS JACK

KEY FEATURES

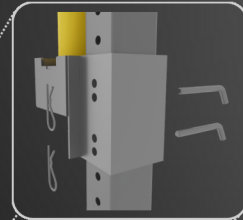

BOLT-ON ADAPTER PLATES

Bolt to the jack head and align with teardrop holes for tool-free use, or remove for direct bolting or side-pin attachment to other upright styles.

ADJUSTABLE JACK HEAD

Slides and locks in 2" increments, starting as low as 24", to reduce lifting strain and eliminate top-heavy setups.

PROXIMITY-BASED LIFT POINT

Places the hydraulic jack near the repair zone—not at ground level—for improved alignment, control and safety.

STACKABLE LIFT COLUMN

Three-piece column sections stack securely to reach the desired height for any repair kit installation.

NOTCHED BASE DESIGN

Allows the lift head to sit closer to the upright for increased lift stability.

FLEXIBLE PUMP POSITIONING

Comes with 5' and 15' hydraulic hoses, enabling comfortable pump placement regardless of repair height, including elevated work up to 13'.

ZINC-PLATED FINISH

Corrosion-resistant and scratch-proof for long-lasting performance in harsh environments.

BUILT-IN MOBILITY

Durable wheels and a forklift-ready, caster-equipped crate make it easy to move and transport.

LIFT WITH CONFIDENCE.
